

Insurance Management Software

One platform for the entire insurance value chain

Brokers. Underwriters. Claims teams. Reinsurers. Compliance. Finance. Leadership.

Run submissions, quoting, placements, policies, renewals, claims, reinsurance, regulatory reporting, and commission accounting in one connected system — with inbuilt AI for insights, quotes, triage, and board-ready reports.

Product	Operations — Insurance Module
Publisher	Pindah Private Limited
Website	www.pindah.org

Pindah Private Limited builds **Operations**, a unified business operating platform for finance, insurance, healthcare, education, logistics, and more. Cloud-first, modular, and built for real-world conditions — multi-currency finance, regulatory compliance, and enterprise capability without enterprise complexity.

When your operations outgrow the systems that built them.

Insurance

Executive Summary

Insurance is a full broker and insurer operating platform inside Operations — not a bolt-on policy register. It covers the complete lifecycle from **submission intake** through **quoting, placement, policy issue, endorsements, renewals, claims, reinsurance, regulatory reporting**, and **commission accounting**, with **seven inbuilt AI agents** that stream decision support from live portfolio data.

The **Insurance Command Center** gives executives and underwriters one screen for pipeline conversion, premium performance, loss ratio, open claims, outstanding premium, commission payable, and regulatory status. Brokers, underwriters, claims handlers, finance teams, and compliance officers work in a single connected workflow — with documents attached to every entity, configurable workflows, and optional self-service portals for brokers and policyholders.

Whether you run motor, property, commercial, travel, micro-insurance, or group schemes, the product catalogue is fully configurable. AI adapts to the product type at quote time — no separate analytics tool, no export to spreadsheets.

Who This Is For

Role	How they use Insurance
Brokers and placement teams	Capture submissions, generate quotes, compare markets, record placements
Underwriters and product managers	Review risk, bind cover, issue policies, manage endorsements and renewals
Claims adjusters	Register FNOL, manage reserves and payments, triage with AI support
Reinsurance and actuarial staff	Maintain treaties, layers, allocations, and programme analysis
Compliance teams	Track regulatory filings, validation results, and scheduled returns
Finance teams	Manage client money, broker commissions, and commission statements
Executives and CUOs	Monitor Command Center KPIs, AI insights, and board-ready AI reports

Key Capabilities

- Insurance Command Center with underwriting pipeline, premium, claims, and compliance KPIs
- Submissions, quotes, placements, and policies — full underwriting lifecycle
- Endorsements and renewal queue
- Claims — FNOL, reserves, payments, and claim documents
- Reinsurance — contracts, layers, and allocations
- Risk items and risk factors on submissions and policies

- Regulatory filings, reports, and validation results
- Client money, commissions, and commission statements
- Configurable workflows and business rules
- Insurance products catalogue — any line of business, any premium level
- AI-powered insights, quote builder, quote comparison, claims triage, renewal strategy, treaty analysis, and analytics reports
- Document attachments on submissions, policies, and claims
- Broker and client self-service portal architecture

Important Concepts

Term	Meaning
Submission	New business intake — the starting point sent to the market for quoting
Quote	Terms, premium, and coverage proposed for a submission
Placement	Confirmation that an insurer bound the risk on agreed terms
Policy	Issued contract of insurance linked to a placement
Endorsement	Mid-term change to an active policy
FNOL	First Notice of Loss — initial claim registration
Reserve	Expected cost set aside for an open claim
Client money	Premiums held on behalf of insurers and clients
Treaty	Reinsurance arrangement ceding risk to reinsurers
Loss ratio	Incurred claims as a percentage of earned premium

11. [AI Analytics Reports](#)
12. [How Insurance Connects to Other Modules](#)
13. [Related Documentation](#)

Getting Started

- 1. Sign in to Operations.
- 2. Open **Insurance** in the sidebar (available when the Insurance module is activated for your organisation).
- 3. You land on the **Insurance Command Center** dashboard.

The sidebar groups the full insurance operation — submissions through reports — under one menu.

Insurance Command Center

Open **Insurance** → **Dashboard**. The Command Center is your operational nerve centre for underwriting, premium performance, claims, reinsurance, and regulatory compliance.

What you see

- **Underwriting pipeline** — submissions, quotes, and placements in the book
- **Active policies** — in-force count and policies due for renewal in the next 30 days
- **Open claims** — count and total paid to date
- **Loss ratio** — incurred versus earned premium with visual indicator
- **Premium metrics** — gross written premium, net written premium, earned premium, outstanding premium
- **Commission payable** — broker commission accruals
- **Reinsurance and regulatory** — contract count and filing status
- **Charts** — premium by product line, claims by status, monthly premium trend, loss ratio trend
- **Lifecycle chain** — visual flow from submissions through quotes, placements, and policies

Quick actions

From the dashboard header you can jump to **Submissions, Quotes, Placements, Policies, Claims**, or **Reports**, create a **New submission**, open **Insights** (AI executive briefing), or **Refresh** data.

AI Features

Insurance includes seven inbuilt AI decision points. Each streams analysis from live module data and supports follow-up questions in context — native to the ERP, not a separate chat tool.

#	AI feature	Where to open it
1	Dashboard Insights	Insurance → Dashboard → Insights
2	AI Quote Builder	Submissions list or submission detail → AI Quote
3	AI Quote Comparison	Insurance → Quotes → Compare Quotes
4	AI Claims Triage	Open a claim → AI Triage
5	AI Analytics Reports	Insurance → Reports
6	AI Renewal Strategy	Insurance → Policies → Renewals → AI Renewal Strategy
7	AI Treaty Analysis	Insurance → Reinsurance → Contracts → AI Treaty Analysis

Dashboard Insights

Click **Insights** on the Insurance Command Center. The AI reads your portfolio KPIs and produces an executive briefing — portfolio posture, key metrics, strategic insights, and priority actions. Ask follow-up questions in the panel; the conversation keeps dashboard context.

AI Quote Builder

From **All Submissions** or a submission detail page, choose **AI Quote**. The AI reads the submission and risk details, then streams a structured quote draft — coverages, limits, deductibles, premium, rating basis, and terms. Edit the preview, refine with natural-language prompts, then **Save Quote** as a formal quote version.

AI Quote Comparison

Open **Insurance** → **Quotes** → **Compare Quotes** and select multiple quotes. The page builds a side-by-side AI comparison with premiums, terms, pros and cons, and a binding recommendation for underwriters.

AI Claims Triage

Open a claim under **Insurance** → **Claims**, then click **AI Triage**. The AI assesses severity, liability, reserve adequacy, fraud indicators, and recommended next steps from the claim file, reserves, and payments.

AI Renewal Strategy and Treaty Analysis

On **Renewals**, use **AI Renewal Strategy** for retention and repricing guidance. On **Reinsurance** → **Contracts**, use **AI Treaty Analysis** to review layer adequacy, cession efficiency, and exposure gaps.

Submissions

A submission is the starting point for new business sent to insurers.

View all submissions under **Insurance** → **Submissions** → **All Submissions**. Use **AI Quote** from the row actions menu to generate a quote from any submission.

Creating a submission

1. Go to **Insurance** → **Submissions** → **New Submission**.
2. Enter reference, status, product, effective and expiry dates, and risk description.
3. Attach supporting documents and add risk items.
4. Save and track status through the underwriting process.

Quotes and Placements

Quotes

1. Open **Insurance** → **Quotes** → **New Quote** (or create from a submission via **AI Quote**).
2. Enter terms, premium, and coverage details.
3. Save and send to the client or market.

Use **Compare Quotes** for AI-powered side-by-side comparison before binding.

Placements

When a quote is accepted, record the **Placement** — confirming which insurer bound the risk and on what terms.

1. Go to **Insurance** → **Placements** → **New Placement**.
2. Link to the accepted quote and submission.
3. Confirm placement details and effective dates.

Policies

Issuing a policy

1. Open **Insurance** → **Policies** → **Issue Policy**.
2. Complete policy details from the placement.
3. Issue documents to the client.

Endorsements

Record mid-term changes under **Endorsements** — coverage changes, cancellations, or corrections.

Renewals

Renewals lists policies approaching expiry. Review, re-quote, and issue renewal policies from this queue. Use **AI Renewal Strategy** for retention and repricing guidance.

Claims

First notice of loss (FNOL)

1. Go to **Insurance** → **Claims** → **File FNOL**.
2. Select the policy, loss type, location, and incident details.
3. Submit to open a full claim record for ongoing handling.

Reserves and payments

- **Reserves** — set and adjust expected claim costs by type
- **Payments** — record claim payments to beneficiaries or service providers

Open any claim and use **AI Triage** for severity, reserve adequacy, and fraud analysis. Attach survey reports, photos, and assessment forms via the built-in document panel on each claim.

Reinsurance and Risk

Reinsurance

Manage outward reinsurance under **Insurance** → **Reinsurance**:

- **Contracts** — treaty and facultative arrangements
- **Layers** — programme structure
- **Allocations** — how risk and premium cede to reinsurers

Use **AI Treaty Analysis** on the contracts list for programme review.

Risk management

- **Risk Items** — insurable objects and exposures on submissions and policies
 - **Risk Factors** — rating factors applied to pricing and underwriting
-

Regulatory and Finance

Regulatory

Stay compliant with:

- **Filings** — submissions to regulators
- **Reports** — scheduled regulatory returns
- **Validation Results** — outcomes of regulatory checks

Finance

- **Client Money** — premiums held on behalf of insurers and clients
- **Commissions** — broker commission accruals
- **Statements** — periodic commission statements

Outstanding premium aging on the Command Center supports credit control alongside Accounting receivables.

Workflows, Products, and Portals

Workflows and rules

Configure automated steps under **Workflows** and business logic under **Rules** — for example routing submissions by line of business or escalating overdue tasks.

Products catalogue

Define insurance **Products** with standard wordings and rating parameters. Add motor, property, commercial, travel, micro-insurance, or group schemes without code changes.

Self-service portals

Broker and client portal architecture is built into the platform — brokers can view policies and commissions; clients can view policies, make payments, and submit FNOL through the portal.

AI Analytics Reports

Open **Insurance** → **Reports** for board-pack quality analytics generated in seconds from live registers and dashboard data. Four report types stream AI-generated HTML — regenerate any time for a fresh analysis.

How Insurance Connects to Other Modules

Insurance is designed to sit inside the wider **Operations** platform. Activate complementary modules as your operation grows.

Module	What it adds for insurance operations
CRM	Prospect and client relationships, broker contacts, pipeline for new business, activity history
Accounting & Sales	Premium invoicing, receipts, outstanding premium collection, multi-currency
Documents	Central file library — policies, submissions, and claims also attach documents in context
Analyst	Cross-module questions and deeper exports for board packs and regulatory returns
Organisation	Module activation, roles, permissions, branding on issued documents
Dashboard	Executive KPIs across Insurance and other active modules

CRM

Track broker and corporate client relationships, log follow-up activities, and manage the sales pipeline from prospect through bound policy.

→ See [CRM](#)

Accounting

Link premium collection and commission payments to your general ledger. Outstanding premium on the Insurance dashboard aligns with receivables work in Accounting.

→ See [Accounting & Sales](#)

Documents

Every submission, policy, and claim supports document attachments — survey reports, policy wordings, claim photos, and regulatory filings. Use the central Documents module for organisation-wide file storage.

→ See [Documents](#)

Analyst

Ask cross-module questions from the header Analyst panel — for example trends across insurance production and CRM pipeline in one conversation.

→ See [Analyst](#)
